

## Verdissimo® Preserved moss

### **Description:**

Natural moss, undergoing preservation process to maintain the appearance and texture of a fresh product over time. The moss used in our processes do not belong to any protected species. They are harvested from private fields, under the authorization of the National Forest Office, according to certification by our supplier.

### **Process:**

- Natural moss is harvested at their specific plantation and then completely or partially dried.
- The moss is treated with a unique preservation formula consisting mainly of bio-based glycerin, minerals and colorants under controlled temperature and environmental conditions. The chemical products used are not toxic, explosive, corrosive, carcinogenic, or chemically reactive and therefore do not represent a threat for human health or the environment
- After several days in the drying room, a second selection process takes place, to select only the optimally preserved product for packing and shipping.

### **Care, storage and handling:**

- Store in dry conditions in temperatures between 12-25°C
- Avoid crushing or pressing.
- Avoid prolonged exposure to direct sunlight. Avoid strong sources of indirect sunlight, such as directly behind a glass surface.
- Avoid exposure to humidity above 80%
- Only for indoor use. No watering

Best regards,
